## ABOVE GROUND STATION

ABOVE GROUND STATION will be installed once service operator found a termite's problem in your place. Inside the station, service operator will mix the baiting and putting in the station. Then, termite brings the bait back to colony as they think the baiting is the foods. Once termite fed to other member, all member will get the bait continuously. No any termite knows that, **baiting will effect to their slough-off (molting) process**. Finally, all termite member in colony can't grow and suddenly pass away.

## IN GROUND STATION

As same as building a fence IN GROUND STATION will be installed around the building with the **frequency of 4 meters per 1 station**. Inside the station there will be a timber for attracting termite. Service operator will inspect the station every 4-6 weeks. Once there is termite coming to the timber, service operator will add the baiting. Then, termite brings baiting to its colony in order to fed member. Finally all member get the baiting which destroy a whole termite's colony.
